Technology-Driven, Solution-Focused

Corporate Overview
Technology evolves at a fast pace. That’s why our experts partner with the industry to identify, test, and apply the best technologies available. When we can’t find what we need, we build custom tools designed to mitigate risk and solve problems. The result is a team focused on staying ahead of technology trends with the proven ability to modernize enterprise IT infrastructures, integrate disparate systems, protect and connect critical data with the right people, adapt new ways to enable secure cloud migration, and continually reshape how managed services are delivered on a global scale.

SOLUTION-FOCUSED
Applying a partial solution to a complex problem is more expensive in the long run. That’s why we look at the big picture, assess needs, and work with you to implement services and technologies that save time and money, while giving you peace of mind.

HELPING YOU MANAGE TECHNOLOGY AND CHANGE

WE ARE UNBIASED TECHNOLOGY EXPERTS
Technology is constantly changing and critical to operating successfully in the digital age. While technology offers great advantages, it also presents significant risks. ManTech has helped customers manage technology and change to lower risk for more than four decades. We are a forward-thinking company with the experience and resources to maximize investments as your needs evolve.
WHO WE WORK FOR

We support more than 50 U.S. government agencies and commercial customers on more than 1,000 contracts. Our customers include federal government agencies across defense, intelligence, space, and health sectors, in addition to commercial customers in banking and financial services and other markets.

Our Largest Customers:
- The Intelligence Community
- Department of Defense
- Federal/Civilian Agencies
- Veterans Affairs
- Department of Justice

Top Markets:
- Defense & Aerospace
- Intelligence
- Healthcare

Certifications:
- ISO9001
- ISO20000
- CMMI Dev1.3, Maturity Level 3
- PCI Audit Certified
- SIPO FedRAMP Certified

We started with a passion for the mission. Today, more than 7,000 of our experts around the globe are committed to the mission to solve some of the nation’s most difficult security and technology challenges for the public and private sectors.

TECHNOLOGY SERVICES

ManTech is committed to being a technology leader. We are recognized by Federal and commercial customers for delivering technology services that facilitate seamless transformation, technology-enabled services, efficiency, and automation where it makes sense.

Command, Control, Communications, Computers, Intelligence, Surveillance, and Reconnaissance (C4ISR)
- Ground, airborne, and space systems
- Test and evaluation
- Telecommunications systems and elevated sensors
- Development, testing, and new technology integration
- Installation, training, and sustainment solutions

Cybersecurity
- Security Operations Center support
- Full-Spectrum Computer Network Operations
- Continuous monitoring/information assurance
- Computer forensics and exploitation
- Penetration testing and network simulation

Enterprise IT
- Multi-layered Infrastructure
- Real-time software applications
- Embedded software engineering
- Virtualization and migration to the cloud
- Application development

Management Consulting
- Process evaluation and analysis
- Organizational change management
- Policy and governance development
- Risk management
- Strategy development
- Operational and efficiency improvements
- Environmental engineering
- Technology implementation and advisory support

Multi-Disciplined Intelligence
- Cyber threat intelligence
- Counterintelligence and HUMINT operations/training
- Intelligence lifecycle support
- Signals intelligence and analysis
- Counterterrorism operations and support
- Big data analysis

Program Protection and Mission Assurance
- Full-spectrum security (INFOSEC, OPSEC, COMSEC, PERSEC)
- Risk management and insider threat protection
- Launch and system safety
- Software assurance and IV&V

Software and Systems Development
- Requirements analysis
- Planning, design, implementation, integration, and enhancement
- Testing, deployment, maintenance, and quality assurance
- Documentation and configuration management
- Waterfall, rapid prototyping, v-model, Agile, and SCRUM

Supply Chain Management and Logistics
- Operational readiness
- Streamlined supply chain
- Global property management
- Maintenance and sustainment

Systems Engineering
- Requirements analysis, development, and management
- Systems development and integration
- Enterprise architecture and concept of operations
- Agile software development
- Systems Engineering and Technical Assistance (SETA)

Test and Evaluation
- Developmental, operational, and flight T&E
- Test exercise support and analysis
- Certification testing
- Ballistics and safe separation analysis

Training
- Mobile Training Teams (MTT)
- Instructional systems design
- Web-based and instructor-led training
- Live/virtual/constructive training
- Interactive courseware and simulations
Cybersecurity and Proactive Defense – Enhanced security posture in an evolving threat landscape

We don’t just block attacks from internal and external threats. We find out where they come from, adapt defenses, and make sure that your assets are protected from future attacks. Our professionals offer full-spectrum Computer Network Operations, in addition to Security Operations Centers that enhance situational awareness. ManTech’s forensics and incident response capabilities will offer an additional level of insight and evidence for post-attack assessments that will strengthen your security posture. Our experts have established the standard for cybersecurity to protect U.S. government and private sector resources. We offer customers insight into their infrastructure and the opportunity to deny, disrupt and degrade attempts that would compromise business operations, reputation, and safety on a global scale.

Cloud Lifecycle Support – Secure migration, management, and sustainment

ManTech has helped several customers migrate applications securely to the cloud while sustaining operations. Our experts have established NIMBUS™, a methodology that integrates best practices, templates, and strategies necessary to maximize cloud migration value. ManTech’s approach integrates cloud platforms using traditional IT, distributes application environments across the cloud and enterprise IT, then facilitates secure operations of the hybrid environment. We work with you to evaluate and recommend options for cloud adoption and prioritize application migration in alignment with business needs and objectives of your organization. ManTech is also one of the first Federal Risk and Authorization Management Program-accredited Third Party Organizations (3PAO) with the expertise to certify cloud providers.

Infrastructure Modernization – Reducing your system footprint and lowering total cost of ownership

Our experts evaluate your enterprise infrastructure from a holistic standpoint with the goal of reducing total cost of ownership and increasing efficiency. We work toward leveraging your existing investments, enhancing and optimizing legacy systems, then consolidating technologies to simplify and automate processes where applicable. Our experts also leverage innovations in cloud, virtualization, mobile technologies, cybersecurity, social platforms and analytics to extend the life of critical applications and systems. The result is a scalable, secure, reliable infrastructure designed to evolve with your organization.

Asset Lifecycle Protection – Protecting your assets from internal and external threats

Internal and external threat actors are becoming increasingly savvy when it comes to getting information. ManTech’s program protection solution is designed to address weaknesses in people, policies, processes, and technologies and fortify your critical assets. Our experts start by building a secure system with secrecy architecture and engineering or evaluating an existing system for vulnerabilities. Then, we integrate aspects of operational security, personnel security, communications security, information security, and training to enhance security posture throughout an asset’s lifecycle. Let us safeguard your organization so that you can focus on driving success.

Biometrics and Identity Management – Increased security that protects assets

ManTech develops innovative solutions to address real-world challenges associated with identity management. We use different technologies including mobile devices for fingerprints, facial recognition, retina scanning, and voice analysis as part of our multi-modal biometrics capability. Our experts combine customized technologies, processes, and integrated systems to ensure access to the right information by the right people at the right time.

Modeling and Simulation – Customized live, virtual, or traditional training using advanced technology

Global mission support demands innovative ways to train people anytime, anywhere. That’s why ManTech develops advanced training using a range of environments including live, virtual, constructive, immersive, and gaming scenarios. We leverage dedicated subject matter experts, a virtual cyber training range, and a longstanding, world-class ManTech University (MTU) that has won several Learning Elite awards as a testament to its excellence in curriculum development and execution. ManTech has also built Crossroads, an online interactive multimedia instruction-authoring environment that allows us to create optimal environments for Shareable Content Object Reference models (SCORM) that enhance e-learning. Our application of advanced technology and experienced instructors makes ManTech’s mobile training teams, curriculum development, long-distance education, digital learning, and a wide variety of educational tools an effective solution for customers anytime, anywhere.

Performance-Based Global Logistics – Secure global logistics, operations, and planning with measurable outcomes

Logistics is not simply moving supplies from point to point. ManTech provides sophisticated systems that secure the entire supply chain from supplies to data. Our systems predict requirements and provide secure, real-time tracking, analysis, and reporting data on demand. ManTech has overseen some of the most important mission-critical logistics and supply chain management efforts for the U.S. Government and provides a full range of logistics and maintenance support across the globe. Our supply chain methods are recognized throughout defense, intelligence, and healthcare communities for ensuring secure movement of data, equipment, and sensitive materials worldwide.

Big Data and Predictive Analytics – Bringing context to data

One of the greatest challenges presented by big data is to establish an integrated infrastructure that connects large volumes of disparate data sources across an organization. ManTech established INSIGHT™, a methodology to connect previously unintegrated datasets, then use the streamlined infrastructure to deliver predictive analytics that turn data into actionable insights. The ability to process and analyze structured and unstructured data results in a seamless transformation to a next-generation big data infrastructure capable of delivering results across your enterprise.

Rapid and Agile Development – Reduced lifecycle cost, using different software methodologies

Technology and budget environment are driving the increasing need to quickly adapt to new and changing requirements. ManTech has developed Agile Tek, a test-driven software development framework that leverages our CMMI Dev ML3- and ISO 9001:2008-certified quality management processes. This modular and open software architecture and design supports different software development lifecycle (SDLC) methodologies like Agile, incremental, and modified waterfall. This promotes ease of integration, rapid evolution and reduced lifecycle cost. Our experienced software developers work closely with business analysts and quality assurance testers to ensure software requirements are fully testable, to reduce software defects.

Surveillance and Reconnaisance – Enhancing the intelligence lifecycle to deliver mission-critical information

ManTech supports and maintains ground-based and elevated sensors to support critical U.S. government missions across the defense and intelligence communities. Our efforts are focused on delivering a range of solutions that enhance the intelligence lifecycle, including collection, processing, and dissemination of threat, weather, and terrain related to the warfighter. ManTech has a dedicated integration facility and mature processes that enable advanced application of the latest technologies to support anti-terrorism and homeland security efforts.

MANTECH INTERNATIONAL CORPORATION

“SOLUTION-FOCUSED

“The right mix of solutions to solve tomorrow’s challenges”
Managing Complex Solutions

ManTech has the resources and experience to operate in any environment. We deploy experts around the globe on short notice for multimedia forensics, training, logistics, and other technology challenges facing our customers that require a rapid response.

PARTNERSHIPS with ACADEMIA and INDUSTRY

ManTech partners with universities and industry affiliates to identify and mentor talented students, collaborate on cutting-edge research, and engage other experts in the community. We believe that outreach to some of the greatest thinkers and doers across academia and industry is one of the best ways to engage in problem-solving for the global community’s growing IT and security challenges.

MANAGED SERVICES

Changing technologies, infrastructure expenses, and increasing cost of operations are driving more efficient methods of service and technology delivery. ManTech has established a MIRROR™ methodology that facilitates successful customer transition to a managed service model with a predictable IT expense. Our approach focuses on keeping costs low, while delivering services and the latest technologies that keep our customers in step with the changing marketplace. Our experts are prepared to deliver all of our services and solutions using efficient, forward-thinking managed service delivery models.

GLOBAL RESOURCES

ManTech’s Worldwide Locations
ManTech is focused on advancing the careers and skill sets of our diverse professionals around the world. Whether our employees decide to take our custom Advanced Cyber Training Program (ACTP) to become computer network operators and developers or complete other industry certifications, ManTech’s professional instructors are there to provide support. ManTech University offers the following advantages:

- Educational and training opportunities in technical, certification, supervisory, business, and leadership courses
- More than 13,000 square feet of conference space with wireless connections, private hotel stations, and technology resources available to both customers and employees
- Strategic partnerships with more than 20 universities that our employees can leverage to secure discounts, explore new programs, gain certifications, and enhance their skill sets for any career path

ManTech University is a proud recipient of the 2015 and 2016 Learning Elite award - Chief Learning Officer Magazine

There is a simple reason that ManTech has successfully served customers worldwide for more than four decades and continues to grow. We are the best at what we do. As threats become more advanced, our passion for the mission is fueled by a desire to solve our nation’s technology challenges better and faster than anyone else in the industry. The stakes are high. That’s why we stay Technology-Driven and Solution-Focused.

Customer-Driven
Our customers trust us to solve some of the most difficult technology and security challenges facing our nation and industry. ManTech’s commitment to mission and solution-focus is the foundation of our company and an integral part of who we are.

Veteran-Friendly
About half of our employees are veterans or have a military background. We believe veterans bring important qualities to the job, and we'll continue to be an employer of choice for those who have served our country.

Employee-Centered
We couldn’t do anything without our experts. That’s why we hire the best people, make sure they remain engaged in our innovative community, and provide the resources and support that they need to deliver results.
